

Accessible Guidelines

Accessibility is about making sure that your presentation is easy for everyone to understand. It ensures that your content is presented in a format that works for as many people as possible, regardless of their abilities. We want to ensure that all participants have equal opportunity to learn, grow, and appreciate your presentation. We have assembled some guidelines to make your presentation at the conference more accessible and inclusive.

For presentations, use sans-serif fonts, such as Arial, Calibri, or Verdana, as they are the easiest to read from the back of a room. The minimum font size for a PowerPoint presentation should be 24.

For shared documents, use sans-serif fonts such as Arial, Calibri, or Verdana. Font size 12 is the standard for Arial and Verdana, font 14 for Calibri. Don't forget to number your pages.

- Ensure text is clear and readable by writing in plain language with short sentences. Introduce acronyms and spell out abbreviations.
- Maintain a high contrast; black text on a white background, or white text on a black background.
- Use a bold font to show emphasis.
- Do not use italics or only upper-case letters.
- All videos should be open-captioned.
- Include a text description in captions or alt-text for all visuals (photos, graphs, etc.).

Unordered Lists (bullets that are not ranked or numbered in any way, they're all the same): Use solid round bullets only (no pictures).

Tips for Presenting

When referencing material on presentation slides or handouts describe what you are referencing. This will help participants with visual impairments know what you are referring to.

This free online Colour Contrast Checker can let you know if the contrast is accessible:
<https://webaim.org/resources/contrastchecker/>

If you plan to share your PowerPoint file with attendees after the conference or to begin best practices going forward, you can use Microsoft's guide to ensure it is accessible.
https://support.microsoft.com/en-us/office/make-your-powerpoint-presentations-accessible-to-people-with-disabilities-6f7772b2-2f33-4bd2-8ca7-dae3b2b3ef25#bkmk_bestwin

You can make handouts available for attendees in PDF and Word format for screen readers.

If showing a video, it is best practice to briefly describe what participants can expect to see and why it's being viewed. This can help everyone know what to expect.

Avoid having a lot of information onto a slide as it can be confusing and unreadable.

Limit the number of visuals on slides and ensure that visuals are connected to the content you are presenting about.

The World Wide Web Consortium has more tips and benefits to making presentations accessible.
